

# Testimonials

We regularly use Natural Cement products for projects that require a cementitious solution. A lot of our work involves working near water courses and the additional environmental considerations, lend themselves to the use of these safer products. The rapid cure time and strength gain is also a major consideration when tidal working. The staff at Natural Cement are always helpful & professional and the products meet all specifications needed to complete our jobs.

## - Oxford Hydrotechnics

We have been using Natural Cement products for over 10 years. Not only are the products consistently great quality, but the support from the staff is second to none, you can always speak to someone in the office to gain technical support and specification guidance. We ensure that our plasterers always carry Natcem 35, as due to its rapid curing time and high strength, it is a product that can be used in a wide range of applications.

## - Preservation Treatments

We love Natcem! We use Natcem 35 regularly for damp works and remedial jobs where the fast setting times and near bombproof finish have proved to be a massive help. Natcem 35 saves us time on small plastering jobs which is a benefit to the customer and us.

# Testimonials

Natural Cement's products have enabled Frescrete to undertake works in sub zero temperatures with continuity. The fast curing properties of Natcem 35 & Natcem AC help our company win contracts as any repair can be started, finished and coated within the same working shift. The products have given Frescrete a winning formula in securing a large contract in Leeds, undertaking a high quantity of floor repairs inside a food factory. We could offer our client minimal disruption as the fast curing times allowed them to continue production within an hour of completing each section of repairs.

## - Frescrete

Here at Cook Group we routinely use Natcem 35 as part of our waterproofing systems that we deliver on many new build sites across the UK. We find the quick-drying nature of Natcem 35 allows us to install our waterproofing systems without unnecessary delays to the Clients programme. We are yet to have a failure on any project where Natcem 35 has been used and we are very happy to say this! The support from the office is impeccable, be it technical assistance or simply a fast delivery needed. .

## - Cook Group

EDS work in a variety of difficult access locations (including confined spaces and underwater), often with limited time available due to tidal or water flow constraints or with customers who want to limit downtime on their assets. NatCem35 provides us with a perfect solution of an easy to use product which provides rapid strength and early set – getting the job done to a high standard in the minimum time necessary.
